

## Web Development Services

### Web Design

Blue Sky Host offers complete design and development solutions. Please contact us if you are interested in discussing your requirement or obtaining a quote.

We can also offer basic templates which can be used for entire sites (such as this one) or for small html-based sites.

### Content Management Systems (CMS)

We have extensive experience configuring third party applications such as Joomla, Mambo, PostNuke, ezPublish, openCMS and Scoop, as well as a variety of shopping cart applications such as Miva and particularly OSCommerce.

We also develop completely customised back-ends for web sites using WYSIWYG editors. But in this day and age we would recommend against that - there are far too many well-supported open source projects.

### Ecommerce

We can integrate your order form, shopping cart or membership system with a payment gateway so that you can instantly process and authorise credit card transactions online. We currently recommend either eSec or eWay depending on your banking requirements and estimated transaction volume.

If you need a shopping cart solution ask us about osCommerce installation and support. We also provide 128 bit SSL certificates from \$385 p.a. so that you can secure your site, or you can use our shared certificate for free.

### Programming

We have experience programming web sites in a variety of scripting languages such as Perl, PHP and ASP. We predominantly use PHP and mySQL.

We also have people who can program more complex applications in a variety of other programming languages. Ever heard of Python? It's bizarrely popular.
